NOTE:
The honey extractor is used to spin honey out of the combs after they have been uncapped. This unit will handle four combs at once. Caution should be used when extracting from new or very old combs as they are subject to breakage. These combs should be partially emptied on one side then turned and partially emptied on the other side, repeating this procedure until all honey is removed.
1/4" WING NUT & FENDER WASHER

ADJUSTING SLOT

3"x3"x3/16" STEEL PLATE
